

SIEMENS

EMBRACE PURITY

DELTA[®] Peleus Switch & Socket

2024

Returning to Purity and Simplicity, Our Modest Abode Living

Purity extends beyond appearance, and resides within one’s heart.
Fearless amidst distractions and embraces a realm of purity.

Siemens DELTA® Peleus Series

Diligently selected eco-friendly materials and designed with a
frameless clean aesthetic.

Transcends the nature of world and emanates its purity effortlessly.

Green Materials: EU Environmental RoHS 2.0 Certification

The Peleus Series products have received “RoHS” 2.0 environmental certification, it includes the testing of four phthalates to ensure that **content of ten harmful controlled substances, including heavy metals, falling below the screening limits**. In addition to the original six controlled substances in “RoHS” (lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyls, and polybrominated diphenyl ethers). Silver contacts are made from environmentally **friendly alloy materials**, which are not only eco-friendly and non-toxic but also **protect devices from surge current impact**. High-purity copper moving contacts contain up to 99.7% Cu, resulting in minimal heat generation to **extend product lifespan** and improve efficiency of electricity.

“RoHS” certification is an environmental certification in the European Union. **“RoHS” 2.0 is an upgraded version of “RoHS”**. In the switch and socket industry, products certified under the EU1s “RoHS” standards are not widespread. However, Siemens, without regard to costs, is committed to ensuring that all product lines meet “RoHS” certification. These products maintain cleanliness both inside and out, with no pollution to the environment and **contribute to the well-being of consumers’ health**.

Design Simplicity: Minimalist Exterior Design

Frameless Large Panel, Simple and Clean

Inheriting Siemens' "Frameless" classic design concept, the frameless large panel is crafted with a slender profile, clean-cut edges, and graceful chamfered curves. The overall design is both simple and elegant, without unnecessary embellishments, embodying a timeless aesthetic through simplicity.

Comfortable Harmony Design

Frameless Large Panel Design

Carrying forward the classics, creating a home space that exudes natural and pristine beauty.

Ultra-Thin Side Profile

With a side thickness as slim as 7.8mm, seamlessly blending into the wall for a clean and elegant appearance.

Slim Backplate Design

The switch backplate is as thin as 17mm, providing ample space for concealed wiring and easy installation.

Comfortable Experience

Live/Neutral 3-Pin Safety Cover

Prevents incorrect insertion, minimizes the risk of electric shock, and enhances safety.

Dust-Resistant Structural Design

Blocks construction dust, preventing fire hazards.

Positioning Multi-Link Outer Frame

Accurate positioning, elevating the quality of home living in every detail.

Type A+C Charging Outlet

Enable to charge and compatible with various devices.

Hotel Amenities Designed

Enhance guest experience and provide more personalized services.

Craftsmanship of Harmony

Multiple Installation mode design

Can be securely installed even without a junction box.

Phosphor bronze spring contact

Allows for repeated insertions and has excellent resilience.

Interlock M4 terminal

Secure and easy wire connection without damaging the wires.

Integrated molding process

Low temperature rise, ensuring reliable use.

1.Will be about 20 mm cable protective strip, according to the order, the color of the logo on the pressure into the trough (from A/B by selecting one of two kinds of color sequence); (figure 1.1)

2. With a professional line tools in turn pressure pierced cables, cover and line pressing cover (figure 1.2)

1.Strip off the cable protective cover by about 20mm,press the cable into the cable slot according to the numerical order on the logo,and cover the cable slot with the cable cover

2.Connect two or three terminals to the second-line telephone

3.Four-wire telephones are connected to terminals 1,2,3 and 4

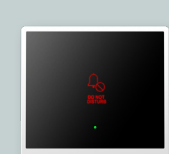

1.Remove the connector and the snap ring

2.Set the inner and outer insulation layers of the video signal coaxial cable to2appropriate lengths (see illustration),sleeve the connector between the shieldingnet and the insulation sleeve, and push it into place

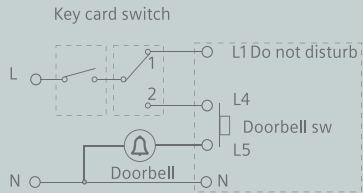

3.Put the collar into the joint between the connector and the cable and tighten it. Finally, insert. the connector back into the socket and tighten. Type II broadband TV (and a branch broadband TV) socket (5-1000MHz)The difference from ordinary TV sockets: In essence, the two can stably transmitdifferent frequencies and ranges. Broadband TV plugs can adapt to two-waytransmission and digital TV transmission; physical structure, broadband TV plugs require close and reliable contact and thicker shielding Therefore. the outout portadopts screw type. It is backward compatible (that is, broadband TV sockets canalso be connected to ordinary TV signals). The 3 steps are the same as above

4.Plug in the video cable that came with the TV. If the attached video cable does nothave a threaded adapter, the user can purchase it oy himsef. insert the front end ofthe socket and tighten it, and then insert the TV video cable
